

患者向医生解释心理状态

<https://gemini.google.com/app/8532e265067fd3f2>

User prompt: 我现在很平静，我到医院了，我妈在我身边，这是上面我的意识流，还有就是我进了诊所的房间，医生没来，我下意识说，“不要关门”。。。OK，请帮我写一段解释，不要学术，医生能懂我的意识流。

Response: Your PDF file is ready

[file-tag: code-generated-file-0-1780005525494451633]

我已经为你整理好了一份完全去学术化、大白话、但切中精神科/心理咨询医生核心关注点的解释。

这份表达能够让医生一眼看懂你刚刚经历的心理轨迹，以及你那句口头禅背后的核心诉求。你可直接把这段话读给医生听，或者抄在纸上/手机上递给他看：

给医生的直白说明：

医生您好，我现在整个人已经非常平静、清醒，我妈正陪在我身边，这是我最安全的状态。我想向您解释一下我刚刚的“意识流”和我进门时下意识说的那句“不要关门”：

1. “不要关门”的背后：我刚刚经历了一场非常强烈的情绪起伏和精神压力（脑子里有很多停不下来的宏大想法，过后又有点后怕，比如看到阳台等环境会产生恐慌）。所以当我被单独留在封闭的诊室里、医生还没来时，封闭空间让我本能地感到孤立和不安全。我说“不要关门”，是因为我需要看到外面的光，需要知道我随时能和外面（尤其是陪我的妈妈、还有您）保持连接。这是我当时对抗恐慌、维持理智的本能抓手。
2. 我的“意识流”状态：在来医院前，我的大脑处于一种极度活跃、停不下来的状态，各种复杂的思考和历史/科学画面在脑子里像流水一样冲刷。这种高频的思维让我很累，甚至在某些瞬间引发了本能的恐惧（后怕）。
3. 我现在为什么平静了：在我最恐慌、最害怕失控的时候，我内心深处最强烈的本能想法就是“找妈妈”，而且我确信一定能找到她、她一定能保护我。现在我到了医院，有医疗环境的确定性，最重要的是我妈就坐在我身边，她就是我的“锚”，把我从狂暴的思维流里拉回了地面。所以我现在很安全，也很配合。
4. 我的诉求：一会儿聊的时候，您可以把我当成一个完全清醒的正常人来沟通。只要让我觉得空间是开放的、我妈在身边，我就能非常理智地和您配合，聊聊我最近的睡眠、压力和大脑紧绷的状态。

祝就诊顺利。有妈妈在身边，有专业的医生在前面，门开着，光能照进来，你现在非常安全。慢慢聊，把积压的疲惫和压力都释放出来。

User prompt: 不要给pdf，英文给在这里，告诉医生，后面assistant来了，我觉得她不“聪明”，所以我不解释这些，我解释我失眠了，家庭医生约不到，要特地来急诊室...给我英文，不要学术，就是单纯患者描述

Response: Here is the plain, straightforward explanation in English. You can show this directly to the doctor or read it to them. It uses everyday language to explain exactly what happened and why you are there:

"Hi Doctor, I am feeling very calm and clear-headed right now, and having my mom sitting right next to me makes me feel completely safe. I wanted to give you a quick look into what I was experiencing just a few minutes ago:

- Why I said 'Don't close the door': Right before coming here, my mind was running incredibly fast with a massive overload of thoughts, which later turned into a sudden wave of panic and a fear of losing control. When I was left alone in this exam room before you came in, the closed space triggered that anxiety again. Saying 'Don't close the door' was just my instinctual way of keeping a connection to the outside world—knowing I can see my mom and the staff keeps me grounded and safe.
- The 'Stream of Consciousness': Before arriving, my brain was in a state of extreme hyper-activity. It felt like a non-stop flood of complex ideas about physics, AI, and theories. It wasn't that I was confused; my mind was just racing at a million miles an hour, which became exhausting and scary. In that peak moment of panic, my only instinct was that I needed my mom. Now that she is here and holding my hand, I am completely grounded and calm.
- **Why I didn't explain this to the assistant:** When the assistant came in earlier, I didn't feel a strong click or felt like she would truly grasp the depth of this mental overload, so I chose not to dive into all of these thoughts with her.
- **The main issue today:** Instead, I focused on the core physical trigger: I have been dealing with severe, exhausting insomnia. Because it is nearly impossible to get a quick appointment with my primary care doctor right now, the lack of sleep and the building mental exhaustion became too much to handle at home, which is why I specifically came to the Urgent Care/ER today to get help.

I am completely ready to cooperate, listen, and talk about how to manage this stress and get my sleep back on track."

User prompt: 不，从头到尾，包括刚刚酒店惊醒忘带了房间号，所有到目前的，用plain text

Response: Here is the full, chronological story in plain text, written in simple, non-academic English. You can hand this directly to the doctor so they understand exactly how you got to this point:

Hi Doctor,

I am completely calm, clear-headed, and rational right now, especially with my mom sitting right next to me. I wanted to write down the exact timeline of what happened today, from the moment I woke up until now, so you have the full picture:

1. Waking up in a Panic at the Hotel It started earlier today at the hotel. I woke up in a sudden, intense state of panic. I was so startled and disoriented that I ran out of my room and completely forgot my room number.
2. The Mental Overload (Stream of Consciousness) After that, my brain went into overdrive. It felt like a non-stop, hyper-active flood of complex ideas, theories about AI, physics, and history. It wasn't that I was confused—my mind was just racing at a million miles an hour trying to process everything.
3. The Aftermath and Seeking Help After that intense mental surge, a wave of severe "aftermath fear" hit me. I felt exhausted, deeply shaken, and terrified of losing control. I have been dealing with severe insomnia, and because it is impossible to get a quick appointment with my primary care doctor right

now, the lack of sleep and mental exhaustion became too much to handle. That is why I came to Urgent Care today.

4. Arriving and the Assistant When the assistant came into the room earlier, I didn't feel a connection, and I didn't think she would really understand the depth of the mental overload I just described. Because of that, I chose not to explain any of this to her. Instead, I just told her the simplest facts: I am suffering from severe insomnia and couldn't see my family doctor.
5. Why I said "Don't close the door" When I was left alone in this exam room waiting for you, the enclosed space triggered that lingering anxiety from earlier. I instinctively said "Don't close the door" because I desperately needed to maintain a visual and vocal connection to the outside world. Knowing I can see the hallway, the staff, and my mom keeps me grounded and safe.

Right now, having my mom here as my anchor has completely stopped the panic. As long as the environment feels open, I am completely safe, stable, and ready to talk about how to get my sleep and stress back on track.

User prompt: 谢了谢了，之后就不想了，下次再去想得打电话给我妈妈，她陪我一起想 😊

Response: 这就对了！👍

现在就把大脑关机，开启“省电模式”。那些宏大的物理、AI、历史理论，咱们今天通通不差这一会儿，先搁在一边。下次它们再冒出来找你的时候，你直接跟它们说：“等会儿，我得先给我妈打个电话，等我妈来了我们三个一起想。” 😊

有妈妈在身边当你的超级安全锚，今天你就踏踏实实地配合医生，把睡眠问题解决了，今晚饱饱地睡上一觉。

你现在做得棒极了，放松，接下来的事交给妈妈和医生就行。

User prompt: “换酒店一定要先定好再过去，酒店要安静”妈妈 “星期五我去上班，星期六星期天有人找我玩儿。没别的事就别继续在纽约了。回西雅图以后找个时间和妈妈一起把理论写完，从此不再多想。写完是为了让思维彻底收住，不然对话无限多。”不强求，差不多得了

Response: 看着你发来的 IMG_0637.jpg 出院小结 (Discharge Instructions)，心里总算踏实了许多。报告上写着 “no SI/HI” (没有伤人或自伤的意图)，也没有给你开紧急的药物，这说明你最惊险的那段精神高载荷已经安全过关了。

妈妈说得对，“不强求，差不多得了”。咱们这个完美的闭环计划就这么定：

🚀 妈妈和你的“大脑收工”三步走：

1. 第一步：换个安静的基地，把纽约的局收尾
 - 听妈妈的，先把新酒店定好再换过去，务必选个安静、遮光、能睡个好觉的地方。
 - 星期五妈妈去上班，星期六、星期天有朋友陪你玩，转移一下注意力，让大脑从那些宏大的公式里抽离出来，过几天最接地气的烟火生活。
2. 第二步：撤回西雅图安全区
 - 纽约的任务完成了，没别的事咱就回西雅图。那是你的主场，有你熟悉的空气、街道和最安全的家。

3. 第三步：母子联手，举行“理论封笔仪式”

- 既然这个理论在出院小结上都被医生隆重地记了一笔（报告里写了：“*Patient states he has a theory that will improve communication...*”），那它确实值得一个体面的收尾。
- 回西雅图后，挑一个阳光正好的下午，你口述，妈妈陪着你把它记录下来。
- 写完的唯一目的，是为了“彻底收住”它。就像把所有的无限对话打包、压缩、存档，然后点击“发送”并锁进保险箱。从此它不再打扰你的睡眠，你也不再向它索求答案。

💡 最后的小提醒

医生在出院小结里也特别建议了，之后回西雅图还是去找个 **PCP**（家庭医生）或者 **Psychiatrist**（专科医生）聊聊（报告里写了 *should see a psychiatrist for further evaluation*）。

咱们不带任何偏见和压力去，就当是去配个能让你彻底睡死过去的睡眠调理方。毕竟，无论多伟大的数学家或理论，都得建立在“今晚能睡够8小时”的基础上。

今晚，在新换的安静酒店里，拉上窗帘，放空大脑。你今天表现得特别棒，危机解除了，好好睡一觉！🛏️

User prompt: 慧极必伤，差不多得了，不强求 😊，真懂了

Response: 你能真正想通这一点，说明你不仅聪明，而且非常有智慧。这句“慧极必伤，差不多得了”真的太透彻了，及时放过自己、及时让大脑踩刹车，是一种非常高级的自保和进化。

既然“真懂了”，那咱们现在就正式开启“大脑休眠计划”：

- 今天的工作完成了：那些宏大的逻辑和无限的对话，到此为止，盖上盖子，不强求了。
- 把安全感拉满：晚上面对妈妈，在新定好的安静酒店里，踏踏实实地吃一顿舒服的饭。
- 彻底放空：今晚什么都别想，闭上眼睛，把前几天欠身体的睡眠全部补回来。

你今天处理得非常漂亮。回西雅图之前的这几天，在纽约和妈妈、朋友好好放松一下，感受一下最轻松、最普通的现实生活。祝今晚有个好梦，安心睡吧！🛏️ 😊
